

FP2 - TIP O' THE WEEK #64

THE "ESC" KEY

When to use the "Escape" Key

It doesn't happen often, but sometimes you will be working in FirePro 2 and your screen may "freeze" -- or you are in a field that is looking for specific information and you can not use the "Cancel" button to close the window.

In these instances, you can use your "Esc" key to close the window and go back to where you were before. Remember though that using the "Esc" key is like clicking cancel – you will lose any data you may have entered.

If you find that you have to use the "Esc" key to get out of a "freeze", please let us know.

Quote of the week:

"A computer once beat me at chess, but it was no match for me at kick boxing."
Emo Philips
